

BiznusSoft HR at a Glance:

BiznusSoft HR is a scalable, affordable, and mobile human capital management solution built on a cloud-based platform. Motivate and manage your organization with the power of BiznusSoft HR.

Core HR

At the root of our solution is Core HR which encompasses your organizational structure, accurate & historical worker records, self-service tools, asset management, and training management modules.

Workforce Management

Utilize our tools for workforce scheduling and shift management. Get Time & attendance which is managed using our timeclock, or timesheets. Self-service is handled through our Work Center or our mobile interface. Where workers have full visibility of time tracked, time off balances & requests, plus simple expense entry and reporting

Benefits Management

Provide visibility to your health plans, retirement plans, or company loans provided by your organization. Track worker enrollments and beneficiaries. And integrate with payroll to ensure liabilities and withholdings are covered accurately.

Performance Management

Engage your workforce with a collaborative evaluation process designed for growth. Use cascading goals to focus your teams in the same direction. Our competency builder enables HR professionals to rate workers based on role, then create targeted development plans that positively impact performance.

Recruitment Management

Equip tools to request needed positions with a clear 5 step process, add job related questions, assign assets & required training. Applicants use a candidate portal to apply to posted jobs. Then utilize the applicant tracking process to limit the candidate pool and identify the right person for the job.

Payroll Management

Gain administrative visibility over your payroll by replacing spreadsheets and legacy systems with a flexible, centralized and modern payroll system or integrate our robust workforce management module with your current payroll system.

Manage Your People, Not Your Software

Call, Email, or Visit us to schedule a no obligation demo of our solution.
